

KOOL-AID dye

Try dyeing your own materials with KOOL-AID for a safe and non-toxic dye project.

1. Wet the wool or material—make sure it's thoroughly washed and wet.
2. Add two packages of KOOL-AID to a Crockpot of water. (You may use more or less packages of KOOL-AID depending on the shade you desire—one package for a lighter shade, two for medium and three for darker.)
3. Stir until Kool-Aid is dissolved.
4. Add wool or material.
5. Turn Crockpot on high.
6. When the Crockpot is hot and steaming, turn the temperature down to "simmer" or "low" for 30 minutes.
7. At the end of the 30 minutes, turn the Crockpot off, the dye bath should be "exhausted".
8. Now, rinse the wool and wash with soap or detergent. Note: Make sure the water temperature is consistent, do not plunge hot wool into cold water!
9. Line dry.
